

Recommended Settings Guide

The **Recommended Settings** screen tells you whether your system meets the minimum system requirements. Refer to this guide to [troubleshoot](#) any settings that do not meet the Recommended Settings.

[System requirements](#) are the hardware and software components that are required for the DOE Portfolio Analysis and Management System (DOE PAMS) to operate efficiently. If your system does not meet the system requirements, DOE PAMS may not work correctly. System requirements are listed as minimum requirements and recommended settings. The minimum requirements need to be met for DOE PAMS to run at all, while the recommended settings, if met, will allow DOE PAMS to run as effectively as possible.
